

HelloWorld!

Win Form

What's in this session?

1. Question and Data
2. Create Win form project
3. Add NuGet packages
4. Add using name space
5. Create data set input/output scheme
6. Set data set path
7. Load data

8. Add algorithm
9. Train the model
10. Predict single item

Question and Data

Question: How much is my diamond costed?

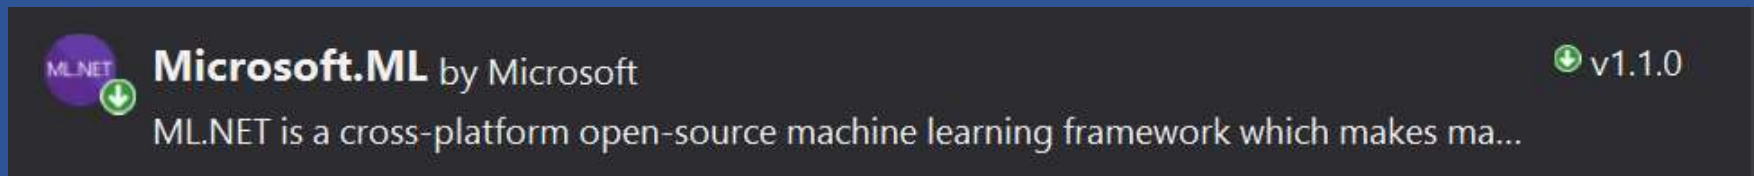

Dataset:

<https://github.com/laploy/ML.NET/blob/master/HelloWorld/diamondsmall.csv>

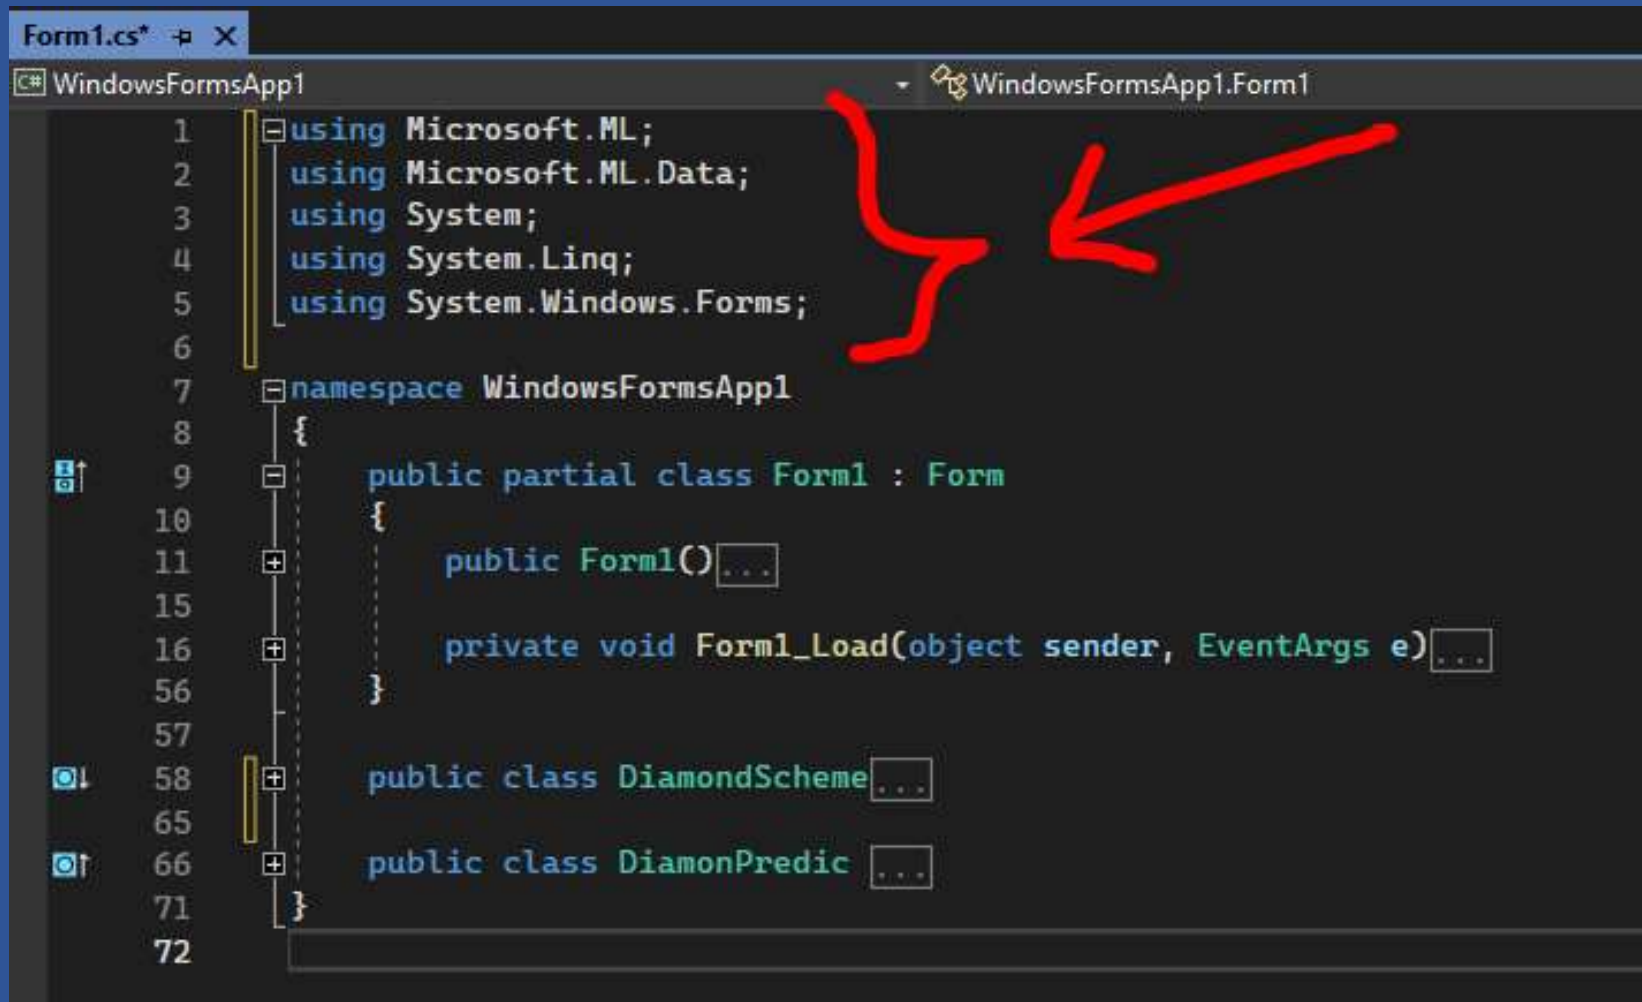

Create New Project

Create new Win form project name = "HelloWorld"

Add NuGet Packages

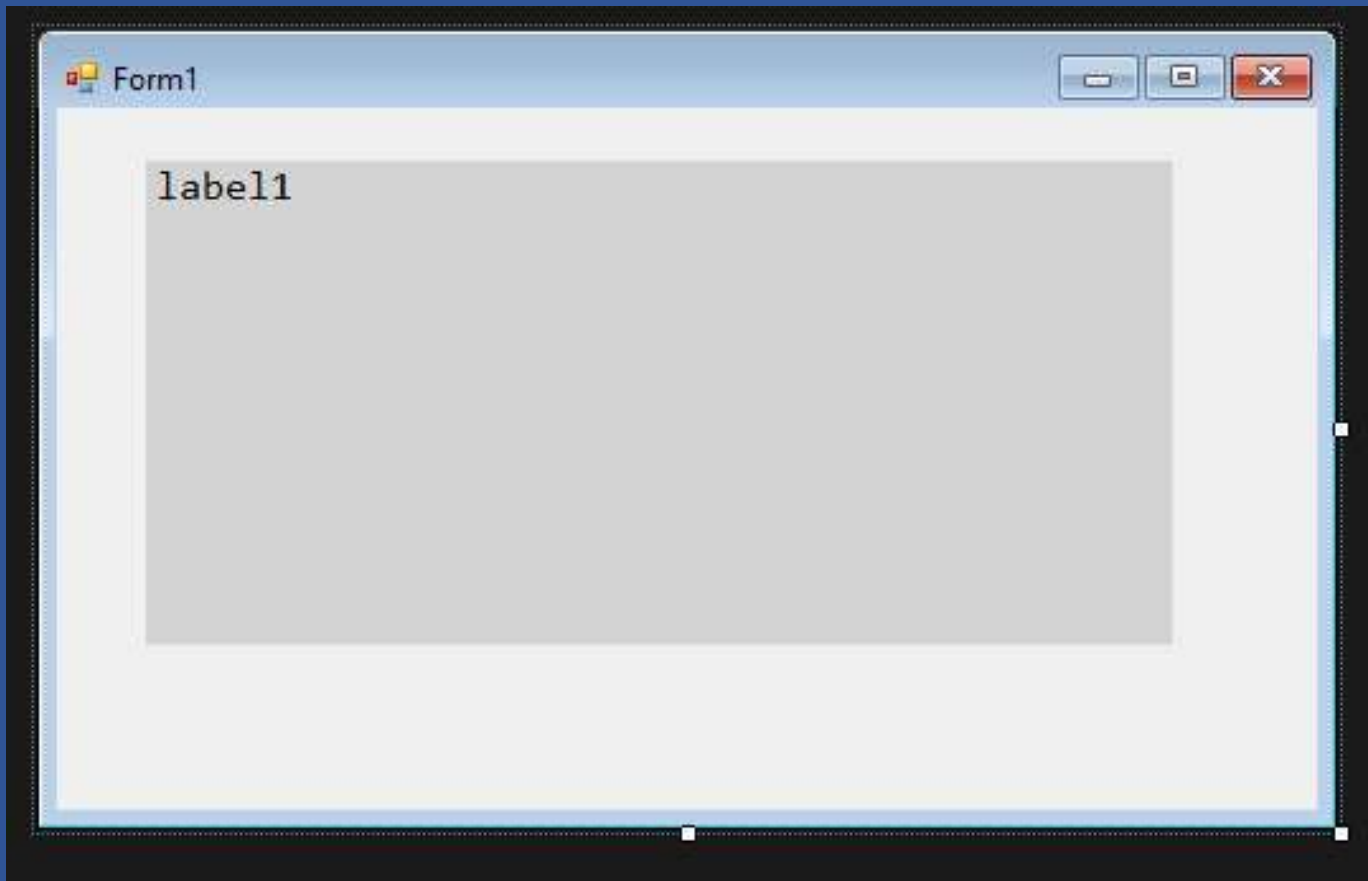

Add Namespace

```
Form1.cs* X
C# WindowsFormsApp1
1  using Microsoft.ML;
2  using Microsoft.ML.Data;
3  using System;
4  using System.Linq;
5  using System.Windows.Forms;
6
7  namespace WindowsFormsApp1
8  {
9      public partial class Form1 : Form
10     {
11         public Form1()...
12
13         private void Form1_Load(object sender, EventArgs e)...
14     }
15
16     public class DiamondScheme...
17
18     public class DiamonPredic ...
19 }
20
21
22
```

Add a label to form

Create data scheme

```
public class DiamondScheme
{
    [LoadColumn(0)]
    public float Size { get; set; }
    [LoadColumn(1)]
    public float Price { get; set; }
}

public class DiamonPredic: DiamondScheme
{
    [ColumnName("Score")]
    public float PricePredict { get; set; }
}
```

In FormLoad

Add data path, context, IDataView, and Debug

```
string trainDataPath = @"E:\ml\diamondSmall.csv";

// create context
MLContext mlContext = new MLContext();

// Load train data
IDataView trainData = mlContext.Data.LoadFromTextFile<DiamondScheme>
    (trainDataPath, hasHeader: true, separatorChar: ',');

// debug watch
var myPreview = trainData.Preview();
```

Create pipe line / set algorithm / train

```
// create pipe line
var pipeline = mlContext.Transforms.Concatenate
    ("Features", new[] { "Size" })

// set training algorithm
    .Append(mlContext.Regression.Trainers.Sdca
        (labelColumnName: "Price",
         maximumNumberOfIterations:100));

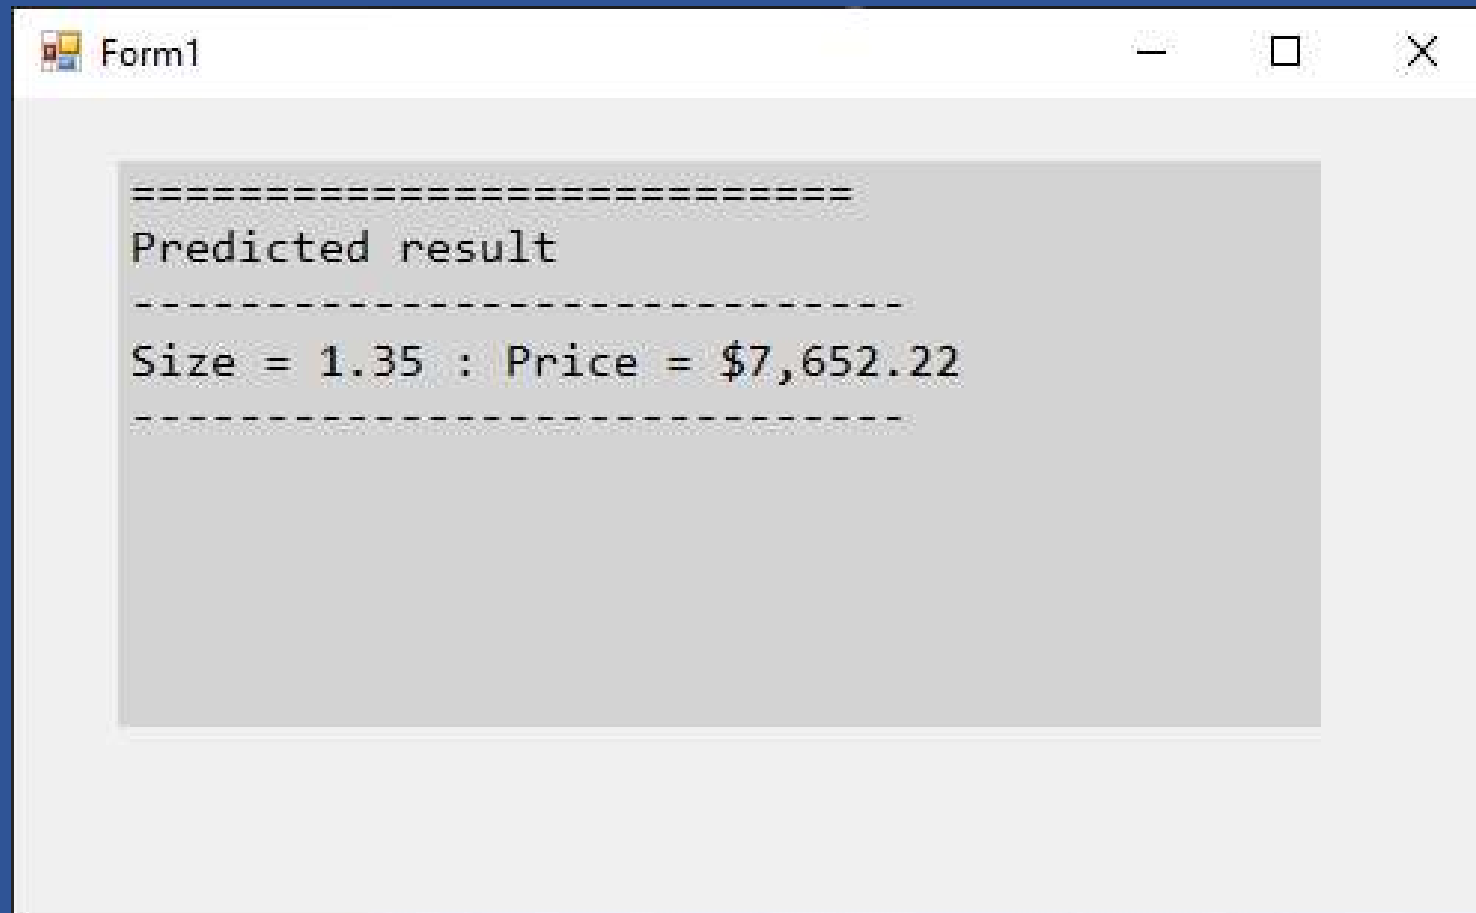

// Train model
var myModel = pipeline.Fit(trainData);
```

Make predict / Show result

```
// Make a prediction
var mySize = new DiamondScheme() { Size = 1.35F };
var myPrice = mlContext.Model.CreatePredictionEngine
    <DiamondScheme, DiamonPredic>
    (myModel).Predict(mySize);

// Show result
label1.Text = "=====\n";
label1.Text += "Predicted result\n";
label1.Text += "=====\n";
label1.Text += $"Size = {mySize.Size} " +
    $"Price = {myPrice.PricePredict:C}\n";
label1.Text += "=====";
```

Run to examine the result

What's next?
